Purpose of this validation

The purpose of this validation is to validate base functionality of the Highstage Part module. It is validated in a stand-alone mode without any reference to the QMS system it will be a part of at each customer, and the customizations it will be equipped with. Therefore, each customer using Part module as part of a certified QMS must validate the module again in their environment.

Customers are free to use this document as a template for their own validation protocols.

Conclusion of validation

Validation was concluded with no remarks.

Scope

The scope of this document is twofold (*TS and TR*). As *TS (Test Specification)* the document serves as a specification of tests to be performed. As *TR (Test Report)* the document serves as a template for logging the actual test results. Before the validation is performed, *TS* is cloned to a *TR*. The *TR* document serves as the report, where all the result from the test is recorded. The *TR* is placed in the “*VALIDATION*” workspace.

Terms and Definitions

- Meta-data:** Attributes of a part controlled by Highstage, e.g. author, workspace etc.
- PAC:** Point and Click with the mouse
- [XXXXX]:** Text inside a closed set of brackets represents the state a part is in, E.g. [Working] or [Approved]
- Document:** A Document is an item created in Highstage (made available from the Document Module).
- Part** A Part is an item created in Highstage (made available from the Part Module).
- File** A computer file as a collection of data stored in one unit, identified by a filename. (*Microsoft office- and text files etc.*)

Features

This test specification for validating the *Part* module in Highstage concerns features and functionality that are associated exclusively with the *Part* module of the Highstage system.

- Unintended/unauthorized deletion/alteration
 - Files directly on the file server
 - Approved or previous version through Highstage
- Links in, out and between parts in Highstage
 - Newest issue, newest draft, new part dialog
 - Between parts
 - From part out
- Part generation and templates
 - Part types
 - Special characters
 - Unique part ID
 - Validation of fields with predefined selections, e.g. workspace name
 - Verify field limits, e.g. max. number of authors
 - Meta-data on template
- Part handling
 - Review / approval
 - Minor changes
 - Event log
 - Revision list
 - Obsolete and re-activation
- Assembly list
- Tree view
- Export

Test approach

The tests are manual performed by one user with normal access rights (FT: First tester= your personal username). In test cases requiring one or more users, the following test users are included:

- First tester (Personal Account)
- Second tester (VALTEST1),
- Third tester (VALTEST2)
- Fourth tester (VALTEST3).

All tests are executed using a standard workstation. For each test, please note which test profile have been used together with the used browser and OS like: 'First Tester using Microsoft Edge 1' please note it like 'FT/ME1'.

If a test pass, write PASS. If a test fails write FAIL and note the behavior or reason.

User explanations:

Username	Specification	Description
(FT) / Personal account	First Tester	Personal profile
VALTEST1	Seconds tester	Test profile
VALTEST2	Third tester	Test profile
VALTEST3	Fourth tester	Test profile

Browser explanations:

Abbreviation	Browser
MEx	Microsoft Edge where x is the version number
FFx	Firefox where x is the version number
CHx	Google Chrome where x is the version number

Other Abbreviations:

Abbreviation	Browser
...	Means a button on the screen with three dots
PAC	Point and Click with the mouse
HS	Refer to the web application Highstage

Test Case 2: Links in, out and between parts in Highstage			
Function: Verify that links can be made in, out and between Parts in Highstage, referring to specific issue, newest draft/working copy, or newest approved version. Verify also that the new Part dialog can be linked to from outside Highstage selecting a specific Part type.			
Description: 1. Environment for this specific test (version/revision). Highstage version: Highstage Part Module validation test report for SW10055-9 2. A description of input data: Test Part (#1) with approved version 1, a newer draft version 2a and an even newer version 2b in Working mode Test Part (#2) with only a version 1a in working mode. 3. Initialising: None			
Step	Specification	Expected	Pass/Fail
2.1	Create a record of the link to newest approved version of testpart #1 from the browser. Remove revision prefix from the URI to the site.	Newest approved version (1) of the part should be shown.	PASS
2.2	Create a record of the link to newest draft version of testpart #1 and PAC it. Remove revisions from link, add &latest=1 to the URI. and browse the resource.	Newest draft version (2b) opened	PASS
2.3	Create a record of the link to newest approved version of testpart #2 and access it with the browser.	No part found since testpart #2 has not been approved yet	PASS
2.4	Create a record of the link to newest draft version of testpart #2 access it with the browser.	Newest draft version (1a) opened	PASS
2.5	Click on [Parts] -> [New] add &itemtype=GD to the URL, and press enter. Copy the URL and make a record of it. Paste the URL into a browser request it.	The site to create a new part is shown on the screen when accessing it with the browser, Type is already filled with the property (GD).	PASS
2.6	Copy the link to newest approved version of testpart #1 add &approved=1 to the URI and save it into testpart. Save the part and reopen testpart #2. PAC the link	Newest approved version (1) opens in the browser	PASS

Test Case 8: Revision control and modifications (Part assemblies)			
Function: <ul style="list-style-type: none"> Verify that <i>Part Assembly (reference structures)</i> properties can only be modified whilst the Parts are in [Working] (<i>as non-administrators</i>). Verify that parts having any number of referenced parts (<i>with any status (review(freeze/approval/approved))</i>) can be set to status 'freeze'. Verify that referenced parts ('children') must be reviewed/approved before current parts can be reviewed/approved. Verify the enabling or disabling of 'lock' on referenced parts to determine whether references are locked to current revisions or updated automatically to latest approved versions of referenced parts. 			
Description: <ol style="list-style-type: none"> Environment for this specific test (version/revision). Highstage version: Highstage Part Module validation test report for SW10055-9 A description of input data: Test files from previous test case. Initialising: None
